

PROJECT SUMMARY

Technical Consultancy Support for ISO14001 Certification Audits, Central Certification Services

KEY PROJECT ELEMENTS

- **AUTOMOTIVE
SECTOR
SPECIALISTS**
- **EMS DOCUMENT
REVIEW**
- **STAFF TRAINING**
- **FINAL
CERTIFICATION
AUDITS**

Central Certification Services provides specialist management systems certification services to companies in manufacturing industry, in particular in the automotive sector. One of CRA's registered principal environmental auditors provided technical support to CCS in a number of ISO14001 certification audits of automotive components manufacturers. In addition, a series of training workshops was developed for one company, addressing EMS awareness, auditing and spill response.

The CRA auditor worked as part of an audit team, with responsibility for examining particular components of the EMSs, including aspects evaluation mechanisms, registers of legislation, specific control procedures for issues such as waste management and air emissions, and a range of other EMS procedures.

The audits were undertaken in two stages, comprising a documentation review and a final implementation audit. The CRA auditor was responsible for identifying and documenting non-conformances, which were reported to the CCS review panel.
