

## **PROJECT SUMMARY**

## **BSI Entropy International IMS Software, Alliance Partner Delivering Training and Consultancy Support**

### **KEY PROJECT ELEMENTS**

- **IMS SOFTWARE SYSTEM**
- **DATA MANAGEMENT**
- **TRAINING SYSTEM USERS**
- **CONSULTANCY SUPPORT FOR EMS DEVELOPMENT**

BSI Entropy International provides software solutions that enable organisations worldwide to improve environmental, social and economic performance, thereby contributing to global sustainability. The software system enables companies to improve risk management, internal control, external communications and overall corporate performance.

The Entropy System comprises internet-based software and databases for environmental, quality and health and safety (EQS) management as well as monitoring, targeting and reporting. The system also can be adapted to manage other areas of corporate risk such as physical security, the supply chain and corporate social responsibility.

CRA, an Entropy alliance partner, provides training support to Entropy customers. CRA staff, verified as competent or expert in the application of the software products, train environmental managers and staff from client organisations in the use of the system and also guide them in how best to apply it to their organisations. CRA's considerable expertise in management systems development and environmental and other management systems standards ensures that effective solutions are delivered.

Examples of Entropy clients supported by CRA include:

- 20 UK Local and Central Government Departments
- Toyota Motors Europe
- BAA Stansted
- Orange
- JTI
- Food Standards Agency
- English Nature
- Aberdeen Harbour Board
- SC Johnson
- BMW
